
CONTENTS

PART ONE

1 Basic Concepts

2

- 1-1 Introduction 2
- 1-2 Flowcharts for structured programming 7
- 1-3 A computer model 21
- 1-4 Procedures and environments 26
 - Executing procedure calls and returns 27*
- 1-5 Global and local variables 40
- 1-6 The state of the MC 50
 - Section summary 54*
- 1-7 References and suggestions for further reading 55

2 Interfacing Procedures

56

- 2-1 Introduction 56
- 2-2 Reference parameters 62
- 2-3 Independence and interchangeability of procedures 74
- 2-4 Automating protection of arguments 77
- 2-5 Expressions as arguments in a procedure call 89
- 2-6 Function procedures 93
- 2-7 Name parameters 101
 - Name parameters matched to simple arguments 104*
- 2-8 Parameters that stand for procedures or functions 107
 - Chapter summary 112*
- 2-9 References and suggestions for further reading 121

3 Recursion

122

- 3-1 Introduction 122
- 3-2 Additional examples 145

CONTENTS

- 3-3 Tree traversal and recursion 149
- 3-4 Binary tree traversal 167
- 3-5 Symbolic differentiation—an application of binary tree traversal 170
- 3-6 The searching of arbitrary tree structures 173
- 3-7 References and suggestions for future reading 183

4 Syntax Formalism **184**

- 4-1 Introduction 184
- 4-2 The BNF notation 184
- 4-3 Syntax charts 189
 - Summary 191
- 4-4 References and suggestions for further reading 191

PART TWO. SYNTAX AND SEMANTICS OF SEVERAL MAJOR PROGRAMMING LANGUAGES

5 ALGOL **195**

- 5-1 Introduction 195
- 5-2 Syntactic structure of Algol-like languages 195
- 5-3 Syntactic structure of ALGOL 60 202
 - Summary 206
- 5-4 Syntax of ALGOL declarations and statements 208
- 5-5 Semantics of ALGOL blocks 216
 - Block entry* 216
 - Exit from a block* 219
- 5-6 Semantics of ALGOL procedures 220
 - Procedure entry* 221
 - Procedure return* 223
 - Name parameters in ALGOL* 224
- 5-7 Case studies—two elementary examples 226
 - Discussion* 227
- 5-8 Case studies of recursive functions—two examples 249
- 5-9 Name parameters matched to expressions 272
- 5-10 Parameters that are procedures 288
- 5-11 Own identifiers in ALGOL 305
- 5-12 References and suggestions for further reading 307

6 Fortran**308**

- 6-1 Introduction 308
- 6-2 Overview of Fortran syntax and semantics 309
 - Summary 312*
- 6-3 Global variables in Fortran 312
- 6-4 Syntax of individual Fortran statements and program units 319
- 6-5 Case study 336
 - Discussion 337*
- 6-6 New developments in Fortran 340
- 6-7 Additional case studies 342
 - Discussion (case 2) 342*
 - Discussion (case 3) 357*
- 6-8 Input/output in Fortran 366
- 6-9 A brief comparison of ALGOL and Fortran 370
 1. *Block structure and dynamic storage allocation 370*
 2. *Explicit versus implicit declarations 372*
 3. *Separate compilability of procedures 372*
 4. *Input/output 373*
 5. *Compound and conditional statements 373*
 6. *Algebraic nature of the languages 375*
- 6-10 References and suggestions for further reading 375

7 Lisp**376**

- 7-1 Introduction 376
- 7-2 Data objects in Lisp 377
 1. *Lists 378*
 2. *Binary trees 379*
- 7-3 Storage structures for S-expressions 381
 1. *Atoms 381*
 2. *S-expressions 381*
 3. *Variables 384*
 4. *Storage management 384*
- 7-4 The five basic Lisp functions 385
 1. *CONS 385*
 2. *CAR 387*
 3. *CDR 387*
 4. *ATOM 389*
 5. *EQ 389*

CONTENTS

- 7-5 Avoiding evaluation of arguments: The use of the quote 392
- 7-6 The Lisp interpreter 394
- 7-7 Overview of Lisp syntax and semantics 395
- 7-8 The syntax of LISP and RLISP 398
- 7-9 Predefined functions of Lisp 412
- 7-10 Arithmetic operations in Lisp 416
- 7-11 Case studies 417
- 7-12 Function arguments and procedure parameters 431
- 7-13 Case study 4: A program for symbolic differentiation 444
- 7-14 Achieving the effect of name parameters in Lisp 461
- 7-15 References and suggestions for further reading 463

8 Snobol

464

- 8-1 Introduction 464
- 8-2 A flowchart language for string processing operations 465
- 8-3 Snobol syntax 471
 - 1. *Assignment* 473
 - 2. *Pattern match* 474
 - 3. *Procedure calls* 479
- 8-4 Storage structures for variables 480
- 8-5 Syntax and semantics of procedure declarations and calls 482
- 8-6 Snobol case study: Symbolic differentiation 489
- 8-7 Simulating reference parameters in Snobol 499
- 8-8 Conversion from one data type to another 502
- 8-9 Defining and using new data types 504
- 8-10 Defining the primitive functions of Lisp in Snobol 507
- 8-11 Tables and arrays in Snobol 512
- 8-12 A Fortran preprocessor in Snobol 517
- 8-13 References and suggestions for further reading 518

9 Multisequence Algorithms

519

- 9-1 Introduction 519
- 9-2 Two types of multisequencing: Asynchronous tasks and coroutines 520
- 9-3 Case study for asynchronous tasking 523
 - Results using Burroughs ALGOL* 533
- 9-4 Case studies for coroutine tasks 540
 - Water-sharing problem* 541
 - Snapshots for coroutine environments* 546

| | |
|---|------------|
| <i>Producer/consumer problem</i> | 548 |
| <i>Chapter summary</i> | 549 |
| 9-5 References and suggestions for further reading | 557 |
| 10 Pascal | 560 |
| 10-1 Introduction | 560 |
| 10-2 Primitive data types | 561 |
| <i>Constant definitions</i> | 562 |
| 10-3 Structured data types | 563 |
| <i>Records</i> | 563 |
| <i>Record structure variants</i> | 565 |
| <i>Arrays</i> | 568 |
| <i>Set structures</i> | 568 |
| <i>Pointer types</i> | 570 |
| 10-4 Program structure | 572 |
| 10-5 Constructs for structured programming | 576 |
| 10-6 Parameter specification and treatment | 577 |
| 10-7 Input/output | 580 |
| <i>Sequential Pascal summary</i> | 583 |
| 10-8 Case study: The four-color problem | 597 |
| 10-9 References and suggestions for further reading | 610 |
| Appendix | 612 |
| Bibliography | 618 |
| Answers to Selected Exercises | 621 |
| Index | 649 |
